Introduction

What is Help Coins

HCS is developing to take charity, to the next degree for all. With HCS extraordinary, modern blockchain technology, the sector of donations will revel in a significant transformation regarding security and speed of delivery.

Taking part in the HCS ICO will provide you with the opportunity to be a part of this innovative blockchain-based decentralized undertaking in addition to receiving the benefit of earnings from the preliminary supplying.

Problems Facing the Industry

Today, if someone wants to send a payment, as an example, one US Dollar to an organization; the journey taken by that dollar before it reaches its destination is both extremely time consuming and costly. This problem becomes compounded even further when dealing with different currencies Every pit stop and loophole that dollar has to make on the way to its final destination decreases its value. It's eaten away in legal, transaction, processing and other fees until finally, when this dollar does arrive at its destination, only a fraction of it goes to the organization that it was originally intended for. With Help Coins, this entire process can occur anywhere on the planet in seconds, at virtually no cost.

Another large problem facing the current market, is the inability to hold organizations receiving funds accountable to the use of those funds. But now, in the age of blockchain and the distributed ledger, there is a perfect solution. Smart contracts can be used to streamline payments, even place certain conditions and contingencies on payments, to ensure resources and funding are allocated where they are needed the most. With Binance Smart Chain, and our HCS Token, individuals will be able to make contributions based on certainty as opposed to faith. Help Coins isn't designed to simply decrease corruption and responsible spending, but eliminate it entirely through the utilization of smart contracts and the distributed ledger, this distributed ledger will also make financial reporting far simpler than the current system in place, with the end goal being to eliminate year-end filing in its entirety. Transactions can be automatically tracked, monitored and sent off to revenue services for filing purposes. This process is fascinating in that it is both transparent and private at the same time.

The Path to Protocol

Our ability to facilitate change in the fundraising market will largely depend on the amount of capital raised during our token sale. At minimum, HCS will be building an application on top of the Binance Smart chain Blockchain by issuing its own BEP20 Token. This alone is intended to create value for our early investors and solve many problems facing the fundraising market today. However, HCS designed not only to take charity, to the next level but also help individuals who took part in our ICO increase and multiply their investment.

Mission, Vision and Help projects

Help Cains's mission and vision is to create a new global standard for the fundraising industry by creating the first global and decentralized donation marketplace. A market that provides organizations with a new and better method to raise funds by utilizing innovations in blockchain technology. A method that is cheaper, faster and more transparent than the current model all while rewarding people and organizations for participating in the process.

Help Coins Projects

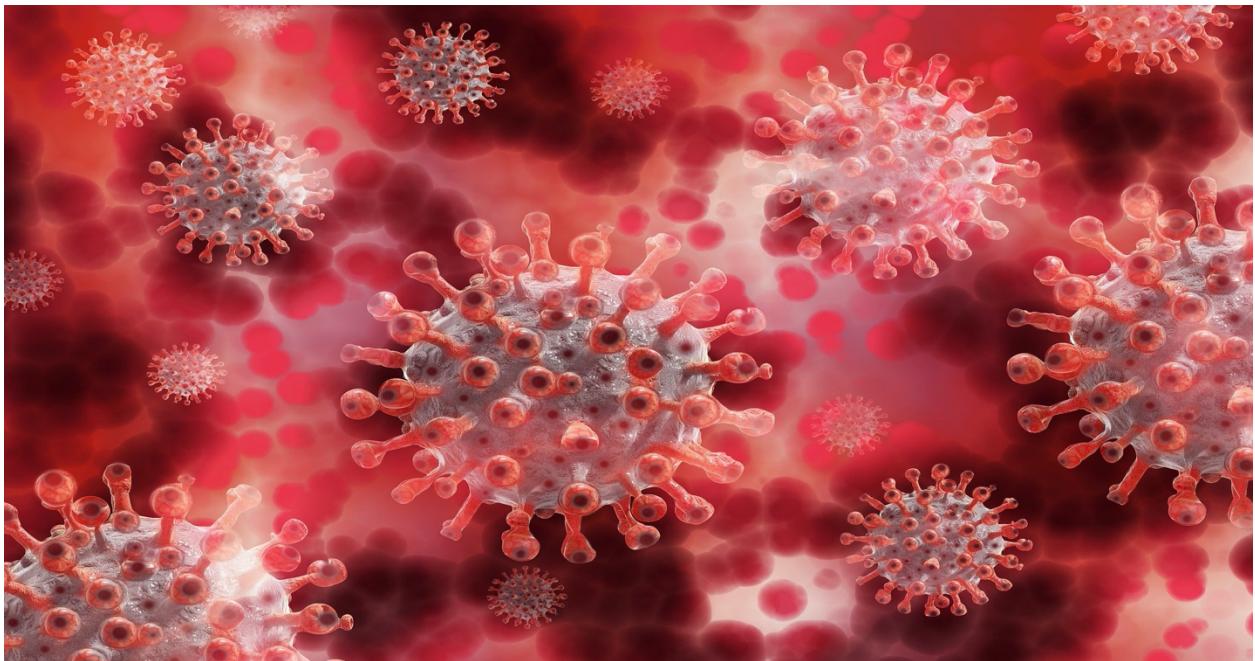

- HCS team will supervise All projects and post every Success on twitter
- All Help coins projects not from tokens the users have it will be from 15% of token Allocation.

Making Water wells in poor villages in Africa

Crypto Against COVID

Send a donation to poor hospitals around the world

Send a donation to the Homeless Organizations

Financial support for poor students and schools.

Recovery from DRUG ABUSE: Donate to organizations only

Donate to animal charity Organization to protect poor animals

Make charities accept our tokens and we will list the names of these charities in our website.

Send 100,000 HCS every month to Binance Charity for 10 months.

Competitive Advantages

Decentralizing the already massive donation market comes with many advantages over the current centralized model:

Lower Fees and Faster Transactions

In today's environment, organizations receiving funds are forced to rely on traditional FIAT Banking Institutions which have a monopoly on the assets and transfer process. When an individual or organization initiates a transaction, they are essentially requesting their bank to perform the transaction on their behalf. This centralized implementation in today's FIAT banking system causes loss of power and control from the end user, who is the true owner of the asset. These institutions can in turn perform actions not directly in the best interest of the end user. This process is time consuming and expensive, yet it occurs continually throughout the day. With HCS this process can be decentralized. Transactions can occur quickly anywhere on the planet with virtually no cost.

Year-end Filing and Financial Reporting: Transparent yet Private

Due to the decentralized nature of a blockchain, the distributed ledger allows for the public visibility of every transaction recorded. As the ledger is distributed across the network and its members, any transaction, once recorded within the ledger, is permanently recorded and is immutable and irrefutable within the network. However, also due to the decentralized nature of blockchain, this is private and secure. No single entity controls this already encrypted data. This distribution of data intrinsically ensures that the data remains secure. In addition, as the blockchain utilizes a hash address, the information can be identified by the initiator of the transaction, also known as the address holder, but not by the public.

This technology will allow for a more efficient year end filings system for tax purposes and all financial reporting in general. A distributed ledger is a disruptive technology in the financial space. It has the potential to completely overhaul the current regulatory and reporting landscape. While it may be going too far and be too soon to suggest these technologies will be able to eliminate specific filing requirements, they will certainly be able to reduce the back and forth between the organizations reporting financial information, and the organizations receiving and processing financial information.

Leveling the Playing Field

In today's centralized market, it is impossible to instantly send money from one country to another when dealing with different currencies. In order to facilitate this process, organizations rely on large central banks; banks that take large fees and multiple days to process a single payment. This process is especially hard, sometimes impossible for smaller organizations, or organizations that are located in smaller developing countries/principalities.

HCS would level the playing field on a global scale, so payment processing is cheap, fast and easy regardless of borders or the jurisdiction of any government. This was one of the primary reasons cryptocurrencies were created in the first place.

Tokens Features

Help Coins Project is simple, but at the same time it is functional. Its main concept is based on two existing problem; security and high operating expenses. These two factors make the project popular and promising, Help Coins is supporting and offering comprehensive functionality for a vast range of digital assets. Here are some of the key elements of Help Coins Protocol...

The Safest Way

Safety and transparency are guaranteed from the blockchain, no commissions and losses on withdrawal (from 5% to 20%) like the normal way of donations.

Trading

- A corresponding trading pair will also operate on decentralized spot trading and centralized cryptocurrency exchange functionality for platform users and more.

Monitoring your Donation

- Full view on monitoring your donation through the BSC Network.

Native Utility Token

- The native utility token of Help Coins will be HCS, the token will have multiple use cases for governance, platform utility, and much more.

Help Coins project

Which allow the users to donate money easy (Not to us) and we will build many real projects to the people which will make our coin more powerful and more profit for you.

In Summary:

1. Transparency for Use of Funds and Automated Year End Filing via the Distributed Ledger.
2. Instant Conversions and Conditional Giving via Smart Contracts.
3. Low Processing Fees and Instant Settlements via the Blockchain.

Because there is a fixed supply, the HCS Token is designed to grow in value as more organizations start using our Tokens and demand for the HCS Token. The donor feels better about giving, and the organization received more money that it can seamlessly accept, track and report. We believe it's a win-win.

As an Application

The HCS Token is designed to streamline the fundraising process and increase accountability by utilizing the Binance Blockchain. This way, users can create smart contracts that signify the relationship between the donor and the target organization. The users making payments can even contribute through buying smart contracts on the Binance Smart Chain network. These smart contracts are then passed through to the intended organization. The advantage of smart contracts, is that they signify some relationship and agreement between two different parties. This will translate to more accountability and less overhead in the fundraising process.

As a Protocol

When we launch our app Help Coins will serve as the primary medium of exchange on this decentralized donation marketplace, The Help Coins Protocol will also allow individual organizations participating on the Binance Smart Chain Network to issue their own tokens to the public for fundraising purposes. These tokens will have their own name, market price and liquidity. Individuals and

organizations will then be able to buy, farm and trade those tokens. Help Coins will always be available to be exchanged for these tokens and offer liquidity. Additionally, depending on the smart contracts, these tokens will also be able to be exchanged with FIAT currencies such as Dollars/Euros, other cryptocurrencies, or even physical donation items (most popular being clothing, food and/or furniture ...etc.

Tokens allocation

Total Supply

The planned supply is one hundred million (100,000,000) HCS tokens.

Token Distribution

TOKEN ALLOCATION

100,000,000 HCS will be minted and will have the following distribution :

51% Distributed to community

15% Help Coins Projects (in Africa - coronavirus - Education - Homeless people - Drug cessation institutions - etc)

15% for our Founders and our team

10% pre-Sale

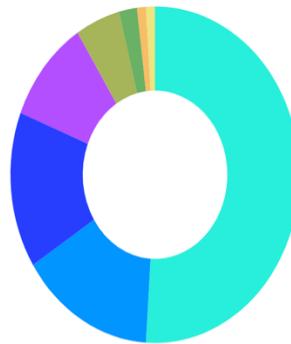

5 % Private Sale

2% Stake , Airdrops and Bounty

1% Binance Charity

1% Binance LauchPool

Blockchain technology gives us the chance to make your finances grow faster and give better returns , Help coins gives us the chance to make your finances grow faster and give better returns and make people dreams true .

51% Distributed to Community

15% Help Coins project

15% Founders and Team

10% Pre-Sale

5% private Sale

2 % Stake , AirDrops and Bounty

1% Binance Charity

1% Binance LaunchPool

Airdrop Overview

We will share 2 million Help Tokens (HCS) to the contributors. Spread Help Coins and get free tokens! Airdrop will start on 15th february and continue until 30th March.

Free Tokens will be transferred to wallets on 1st May , 1st Private sale period will start with 15% Bonus for the first week and pre-sale will start with 10% Bonus for the first week!

How to participate in the Airdrop

Anyone with an BEP-20 compliant Binance wallet may participate in the Airdrop. The way the airdrop works is that the airdrop smart contract will scan through the blockchain for existing BEP-20 compliant wallets.

Two conditions need to be met to receive the airdropped HCS Token as follows:

- \ Must have BEP-20 compliant wallet (we recommend Meta Mask wallet or Trust wallet)
- \ Register for Airdrop on our twitter account (we will post the conditions on our twitter account and BitcoinTalk later on)

Upcoming Private Sale and Pre-Sale details

Stay tuned to our official social media channels (medium – twitter -telegram channel)

Listing on pancake swap

Obviously, the HCS token will be listed on trading platforms. The size of liquidity for the pool will be 20% of funds raised. And the first listing will be pancake swap. A HCS/BNB trading pair will be added there two weeks from the date of the Pre sale. The listing price of HCS will be double the price of the Pre sale.

Roadmap

HOW IT ALL STARTED

March

2021

Starting Private Sale

April

2021

Starting Pre-sale

April

2021

Starting the first Help project in Africa WaterWell after the Pre sale and we will call it CZ binance Appreciation for his effort in Binance smart chain development and Binance charity inspired us to start our token .

May

2021

20 % from funds raised will add liquidity for the pool And the first listing will be pancakeswap. A HCS/BNB trading pair will be added there two weeks from the date of the public sale. The listing price of HCS will be double the price of the Pre sale.

May

2021

Send 100000 HCS to Binance Charity for ten months till send 1 Million HCS to Binance

June

2021

Listing on centralized cryptocurrency exchange(CEX),Decentralized exchanges (DEX) and Starting Help projects

December

2021

20 % from funds raised will add liquidity for the pool And the first listing will be pancakeSwap. A HCS/BUSD trading pair .

February

2022

Create the new Help coins HCSE for ERC20 Network and HCST for TRC20 Network

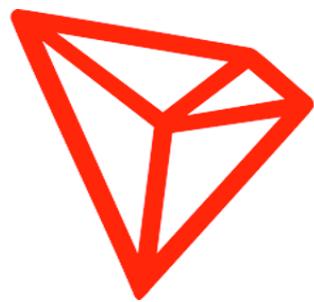

March

2023

Launching Help Coins APP for Android and IOS

Network Integration

Help coins is chain agnostic we plan to have an initial focus of integration the leading products built on 7 networks, help coins will not be limited to. These network products

Conclusion

We believe that blockchain and cryptocurrencies are the donation method of the future. In order to make such donations possible for all charities, we aim to connect the blockchains in the background and offer an easy, secure and low-cost donation platform.

Using the Help coins and its future tools, charities will be able to receive donations from anywhere in the world, without having to deal with bureaucratic or restrictions.

The creation of the Help coins is planned in several stages. Please check our website, Telegram channel for any updates. Next stages will be also announced with Whitepaper v2.0.
